The AMC628 is a very high end single-width, mid-height AdvancedMC™ (AMC) form factor based on the AMC.1 and AMC.3 specification. With the capability to do RAID levels 0, 1, 5 and 6 it is the most advance RAID controller in the market. In addition it has capability to do RAID spans 10, 50 and 60.

The Module has two mini-SAS- SFF-8644 x4 to connect to an external JBOD or other  $\mu$ TCA Chassis Storage solution.

The RAID has capabilities for online capacity expansion and level migration. Further, auto resume after loss of system power during arrays array rebuild or reconstruction, load balancing, check consistency for background data integrity.

The RAID is managed via a sophisticated GUI and runs LSI MegaRAID Software.
